

Honeywell

APPLICATIONS

- In-store mPOS
- Pop up and seasonal sales
- Effective line busting
- Curb-side payment

BENEFITS

- Easy pairing of a payment terminal to Honeywell's CT40
- Compatible with a wide range of popular payment terminals
- Optimized weight and balance for ergonomic use
- Patented sled/M-Case™ combination

SpacePole Duo - the patented mPOS sled that enables fast and exceptional customer service, anywhere.

Keeping lines to a minimum and shortening the transaction time between customer and operator is a key strategy for today's retail and hospitality industries. This increased use of mPOS - mobile point of sale solutions - provides customer service away from the potentially congested point of sale, at a place of the customer's choosing.

The SpacePole Duo is a patented mPOS sled that combines the Honeywell CT40 enterprise class mobile computer with a wide range of mobile payment terminals to create fast, contactless mPOS transactions anywhere. The flexibility of Duo and its simplicity of use makes it easy to go from static scanning to mPOS and back again, in seconds, without compromising the all-in-one characteristic of the solution.

Using mobile technology allows customers to make payments anywhere in-store, at any place convenient to them. Duo immediately takes care of queues and enables great customer service. It is just at home as a flexible point of sale for pop-ups and stores-within-stores, or for a table service within hospitality environments, and supporting payment for collections and home deliveries.

Increased transaction limits and a reduction in the amount of cash being used, has seen contactless payments become the preferred option for many in times of social distancing.

Pairing the CT40 with a payment terminal enables retailers to maximize their return on hardware investment and significantly lower the cost of introducing mPOS.

Duo is designed with user convenience in mind; it is lightweight with a small form factor and compatible with a wide range of accessories such as a wrist strap, shoulder strap or pouch for safe storage and portability. It is very easy to engage and release the CT40, which makes it the perfect solution for mPOS.
